New Arrival in the PRO Family: An Armchair to Complement Flötotto's Successful Furniture Line

Design: Konstantin Grcic Industrial Design, 2012 – 2014

The PRO chair line has rapidly become Flötotto's new success story. The latest chapter: launching at the 2014 Salone del Mobile, the generously dimensioned PRO armchair is not only a real character, but is also set to conquer yet another field of application for the PRO product family. The distinctive plastic seat shell features integrated armrests that hug the user and guarantee superior comfort. The new PRO armchair will initially be available in two designs: one with a newly designed, distinctive four-star wooden base, the other with a four-star aluminium base.

The new four-star wooden base in solid oak is now also available for all other PRO models. Furthermore, there are two new elements to the PRO line: a new beam-mounted solution featuring a wooden base, which is perfect for all sorts of waiting areas, such as those in museums, agencies, offices, shops and practices. Additionally, the PRO chair is now also available with a fully upholstered seat.

With its many different designs and bases, PRO has developed into a differentiated line for almost any field of application. Initially designed as a range of furniture for schools, the line's contemporary and distinctive look has turned it into an international success. The range's most striking feature remains the dynamic backrest with its signature S-shape. The curve offers freedom of movement and takes strain away from the back and pelvis while the seat's three-dimensional shape provides structural stability and allows for the seat shell to be produced without the use of reinforcing fibreglass.

PRO Facts
